## FEEDING SYSTEM SOFTWARE

The Iamatek food software was born from the need to be a program tailored to each client, which allows each production unit to be standardized and compared in the best way and not be subject to only what the market offers.

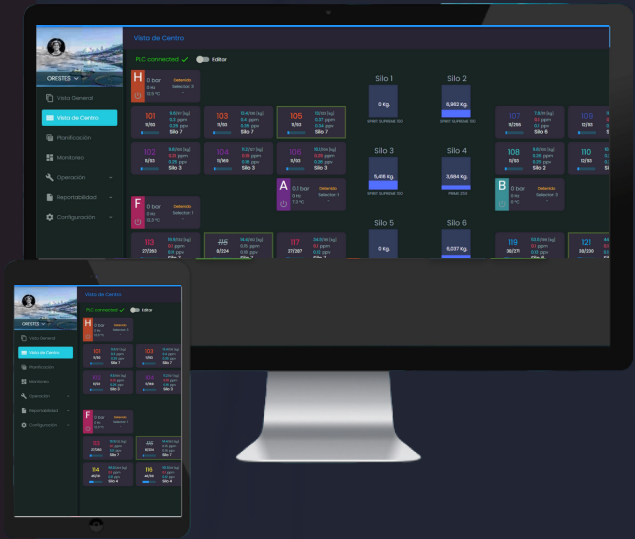

With a local server it allows it to be used by several users who are within that local range or external users if we migrate the information to a server in the cloud, such as Google Cloud, Amazon Web Services, Microsoft Azure, it allows for control remote from the power system.

CONNECTION

Local/Cloud

POWER LINES

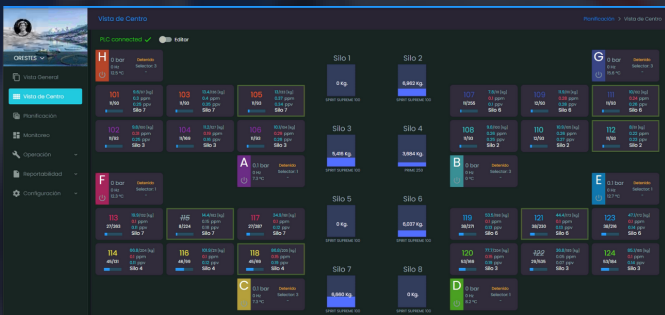

Configurable  
according to the  
client.

# FEEDING SYSTEM SOFTWARE

The software can be used in any other feeding system, since it is compatible with existing hardware, in turn receives parameters and information from production programs and exports the daily feeding to said production software.

Ibatek also provides hardware, such as Westinghouse locks, Kaeser blowers, screws and selectors of its own manufacture.

## FEEDING SYSTEM

Since our beginnings we have managed to contribute to different types of feeding system implementation, whether in updating already installed systems or in implementation from scratch, as well as in fish farming and even abroad.
